

FACTS ABOUT MICE

Mice are tough creatures and can endure a lot of hardship. These rodents however, have some surprising athletic abilities to help them survive:

Mice are driven indoors when it's cold to seek more abundant food sources

Mice can squeeze through a 0.6cm gap

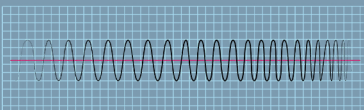

Mice have teeth that grow at a rate of 0.03cm/day

Mice rely on smell, touch and hearing

Mice can hear ultrasound up to 90kHz and can also produce ultrasound for communication

Mice see best in dim light. Their eyesight is weak but their other senses are highly acute.

Mice have a vertical jump of up to 25.4cm

Mice can chew through anything softer than their teeth, including electrical wiring

Mice prefer to travel adjacent walls and along edges

Mice can scale rough vertical surfaces of up to 6.5 feet and walk along thin ropes and wires

Mice explore their territory daily, showing no sign of neophobia (fear or dislike of new objects)

Mice may make 20 to 30 visits to different food sites each night, taking as little as 0.15g of food from each location
